

Engineering Excellence

A Consultative Approach is what separates ESCO Automation from our competition. We appreciate and value the partnerships that we have established with our clients. These partnerships have allowed us the opportunity to enter a project early in its life cycle, and remain involved long after the project is completed.

At ESCO Automation we pride ourselves in knowing and understanding our customers, their business, and what is important and necessary for them to achieve success. This approach has proven to be the road map to establishing and maintaining loyal partnerships with our clients and has allowed our associates the opportunity to play an integral part of the process our clients take as they strive to achieve success through automation.

We're Certified
ESCO Automation is a founding certified member of the Control and Information Systems Integrators Association (CSIA).

Third party auditors measure how well we adhere to an established set of Best Practices and benchmarks in regards to performance standards in key areas of our business, such as, general management, project management, quality management, and technical management. To our client-partners, hiring a CSIA certified system integrator lowers their risk because our certification indicates our commitment to being a proven resource that is technically competent, reputable, ethical, structured, and proficient while demonstrating excellence in project management and risk avoidance to the clients we serve.

For more information about CSIA, visit their website at www.controlsys.org.
