

Des Moines Panel Shop

The Esco Group, through our Des Moines Panel Shop, is partnering with our industrial and municipal clients in the Midwest to provide quality control panels. For over 15 years, **ESCO Automation** has engineered complete control systems, including the control panels. Main control, remote I/O, instrument and motor control panels are designed and built at our facility in Des Moines.

The engineering and panel shop staff have over 40 combined years of design and panel building experience. Panel designs are done with the latest computer design software, complete with quality layouts and electrical schematics. All electrical panels are assembled by qualified and experienced staff to give our clients quality panels, every time. If needed, the panel shop has the capability to build a certified electrical panel with UL 508A labeling.
